

Energy & Carbon Reduction Management Policy

Mission

AJK Woodflooring recognises that, as a key provider to the industrial flooring sector, it has a commitment in helping to tackle climate change by helping to reduce its CO2 emissions. We are committed to responsible energy management and to ensuring that we and our interested parties reduce the amount of money spent on energy. At the same time, reducing energy consumption helps the company to reduce its environmental impact.

Aims

As a key element of AJK Woodflooring, Sustainability Vision, Policy, and Strategy, and consistent with the company's wider objectives under our ISO standards commitments and the resources available, the Energy Management Policy aims to:

reduce electricity usage in its office and operations and travel through the introduction of energy-efficient measures;

increase awareness of energy issues and encourage all staff, and interested parties to help reduce energy consumption whenever they can;

to ensure energy efficiency is built into our staff compliance and office, warehouse and transport activities wherever possible, obtain energy from sustainable sources. Ensuring where possible that we comply with current legislation, and other via due diligence checks.

AJK Woodflooring is committed to improving the energy and carbon performance of its office by developing a culture of continuous improvement through our ongoing certifications and compliance, through monitoring, setting targets, training, and communication.

Accordingly, we require all employees to be familiar with and conduct their duties in a manner that is compatible with our objectives. In addition, by undertaking the above there is an associated benefit in reducing our carbon footprint and ensure that our office and travel methods benefit from these improvements.
